

Key Resources - The Chokro app and backend — 40 features, ~42,800 lines, 1,130 automated tests - Chokro's own QR-coded bins at 3–5 anchor wards and campuses - The plastic passport ledger — the verified custody record we sell - Verification stack: live location check, AI item count and brand-label reading, admin manual review - Founder time plus three short freelance engagements (manual review operator, UI/UX, QA) - First investment (Brian, Sep 2026); soft-launch budget of about Tk 95,000 - Access: ward and campus siting permission, DoE registration, collector and recycler MOUs	Key Activities - Install, label and service QR-coded bins; keep the printed layer alive through user reports - Verify every submission — geofence, AI screening, escalation to manual review when confidence is low - Weigh at collection and apportion mass across the verified drops since the last pickup - Issue plastic passports: material type and form, kilograms, brand owner, place, time, how verified, where it went, carbon avoided - Sign and manage collector and recycler MOUs; track chain of custody end to end - Recruit and onboard eco-SME sellers; operate the discount marketplace - Sell EPR compliance reporting to obligated brand owners; support their DoE filings - Run sponsor-funded campaigns — a bounded multiplier, on one material, at named bins, in a date window - Publish eco-story cards to Chokro's social media with the user's permission - Non-programme: registration and licensing, PDPA compliance, budgeting, fundraising, hiring	Type of Intervention - A product, not a workshop — and three layers that only work together: - Physical: Chokro-owned bins, each with a unique QR code, sited at anchor points - Consumer: a free mobile app (Android first) that rewards a verified drop with points - Business: the plastic passport — a compliance-grade data service sold to brand owners - Marketplace: eco-SME sellers offer 10–50% discounts; users spend or donate their points - Delivered as a Dhaka pilot across a few wards and campuses; soft launch end of September 2026	Segments BENEFICIARY - Everyday supporters who drop plastic at a bin and earn points - Eco-friendly SME sellers — Greenpreneurs — who list, showcase and promote for free - Waste collectors, of whom Dhaka has roughly 100,000, who gain a registered identity, a payment record and a portable work history - Dhaka residents and the city itself: less plastic in drains, canals and landfill CUSTOMER - Producers, importers and brand owners obligated under the EPR guidelines gazetted 13 August 2026 - Corporate CSR budgets and sponsors funding the reward pool - Advertisers — in the app and at the bins - Buyers of graded jhut and recovered-material lots - Social-impact investors	Value Proposition SOCIAL VALUE PROPOSITION - Plastic that would have gone to a drain or a landfill is collected, tracked and actually recycled — Chokro owns the chain from bin to recycler - Informal collectors are brought into a payment system with a work record instead of staying invisible - Small eco-businesses reach an audience already choosing to act, at no cost to them - The reward, the recycling and the evidence all come out of the same single action IMPACT MEASURES - Kilograms collected and recycled, split across the gazette's five plastic categories - Plastic passports issued, and kilograms attributable to each brand owner - Carbon avoided, calculated from published emission factors — third-party validation still outstanding - Verified drops, active bins, and ward or campus league position - Collectors registered, paid, and the kilograms credited to each - Sellers onboarded and discounts redeemed CUSTOMER VALUE PROPOSITION - For obligated companies: audit-ready, geofenced, timestamped chain-of-custody evidence for the annual DoE report — and registration renewal depends on that report - A report is something you write about yourself; a passport is issued to you by somebody else and stamped by the places you have actually been - Goodwill is optional for a company. A legal filing is not — that is why the passport sells and the rewards do not - For sponsors: measurable CSR with named bins, a chosen material and a fixed date window - For sellers: a free storefront, promotion, and customers who came for the reason the shop exists - For collectors: reliable pickups, mobile payout and proof of the work done
Cost Structure - Bin fabrication, installation and servicing at each anchor site - Manual review labour — a running cost, not a hire: about Tk 0 at pilot (roughly 25 reviews a day, absorbed by the founder), about Tk 40,000 a month at city scale, about Tk 240,000 a month at national scale - Cloud, storage and AI screening, charged per verification - Collection and recycling logistics under the MOUs - Registration and licensing — trade licence, signboard and VAT renew annually, not once - Soft launch (one-time plus annual plus one month): Tk 94,577–95,107. First twelve months: Tk 314,508–315,038 - As it scales: review and verification costs rise with volume, cloud cost per user falls, and bins amortise over years	Surplus - Reinvested rather than distributed. In priority order: 1. More bins in more wards, and the two features Bangladesh most needs — Bangla language and offline submission 2. The reward pool and collector payouts, so the collection side stays funded without a sponsor gap 3. Chokro's own eco initiatives — tree planting and similar — which is also where donated points go 4. New verticals: e-waste and batteries, the gazette's sanitary-waste category, and the jhut materials marketplace	Revenue - Four engines, pursued in this order of priority. The percentage split is deliberately not fixed yet — the pilot is what will set it: - CSR funds — companies paying into the reward pool from existing social budgets - Sponsorship — campaigns, in-app placement and branding at the bins - EPR data fees — passport and compliance-reporting contracts with obligated brand owners, the only buyer under a legal obligation - Marketplace commission on seller transactions, and a jhut / materials marketplace taking both sides of the maker's supply chain - Social-impact investment as the funding bridge, not as revenue - At the September 2026 pilot: investment and CSR or sponsor commitments only. No EPR contract is signed yet — DoE registration comes first
